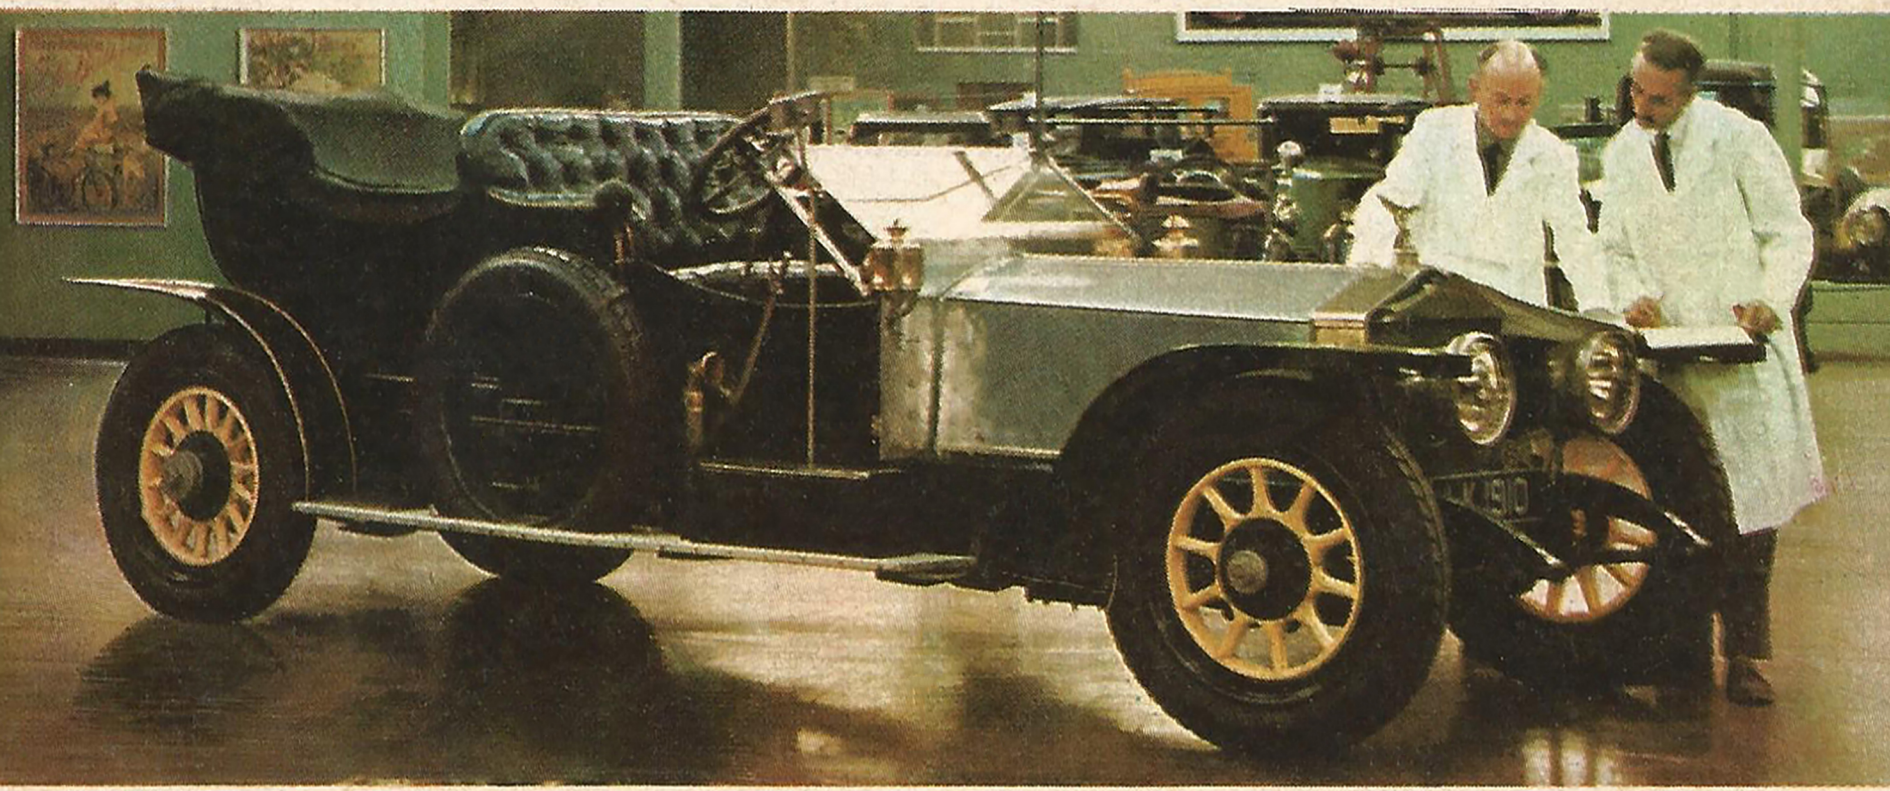
How "MATCHBOX" MODELS are made

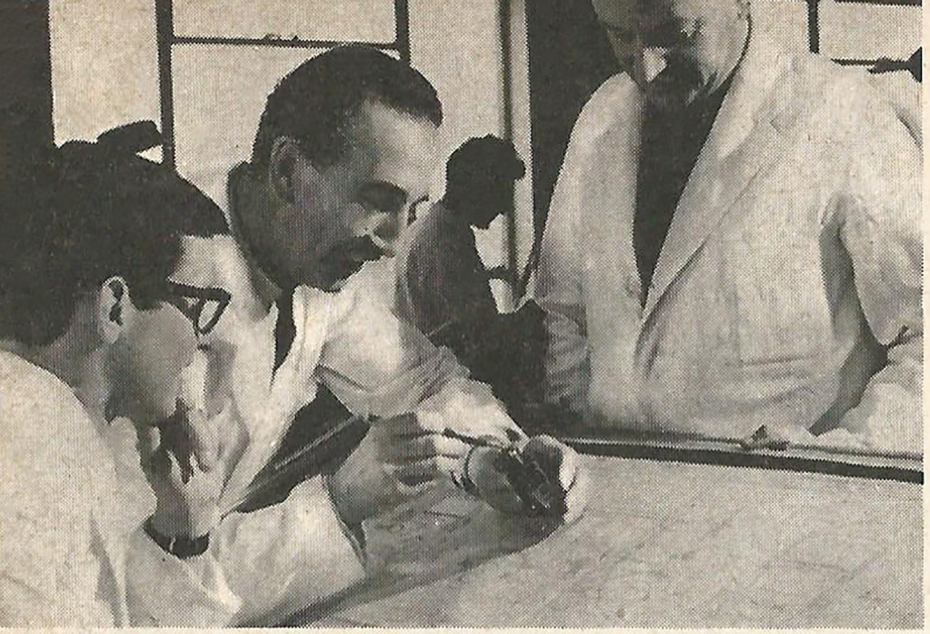


More than five hundred million "Matchbox" models have been made since the series was first introduced during 1953, and to-day over two million "Matchbox" models are made every week.

The life of a new model begins at a design meeting attended by senior Lesney executives. The suitability of a particular vehicle as a "Matchbox" model is discussed and the manufacturer of the full-size car is approached for photographs, drawings and other information

Enthusiastic support is received from manufacturers throughout the world and many top-secret, exciting new cars are on the "Matchbox" drawing boards long before they are launched to the world markets.

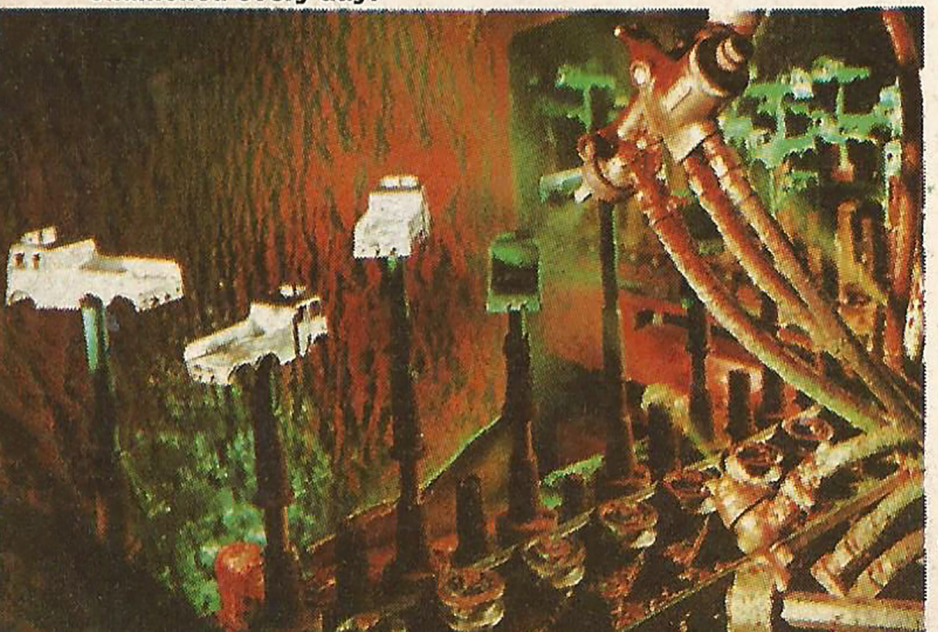
In the case of a "Model of Yesteryear", the full-size car is located wherever it may be in the world and a team of "Matchbox" experts photograph, measure and draw the super-details which will be included on the finished model.



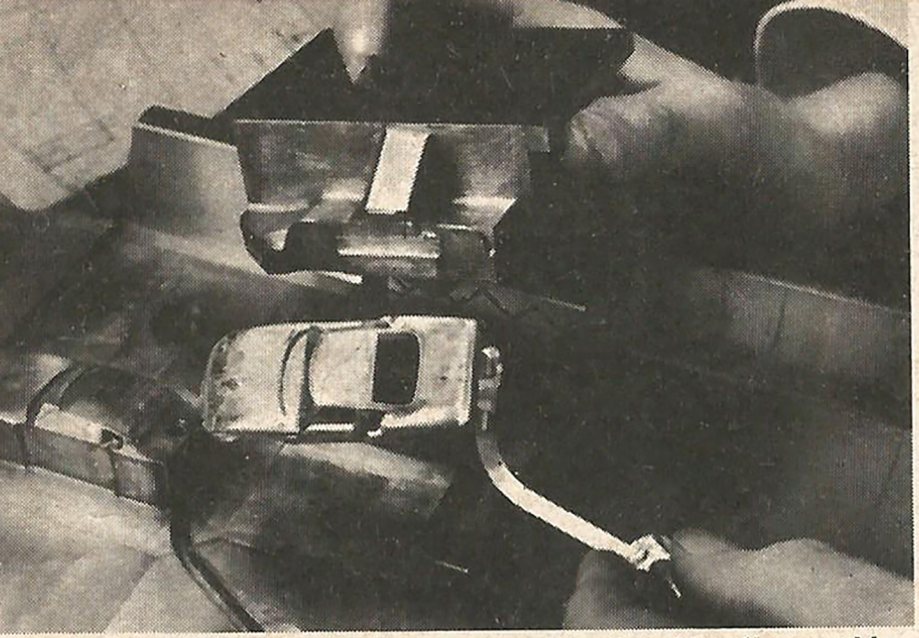
1 Once the details of a full-size vehicle have been obtained, many hours of careful work are necessary in the main drawing office at Hackney.

2 In the pattern shop, highly specialised craftsmen carve large wooden models which form the basic shape from which the miniature will eventually be diecast in millions.

5 The spray shop uses nearly 2,000 gallons of lead-free paint every week, and over 2½ million components can be stove-enamelled every day.



6 Final assembly takes place on twenty lines and sometimes several different models and their components come down each line at the same time.



3 Over 160 skilled toolmakers are employed making the moulds for "Matchbox" models from the finest grade of chrome-vanadium steel.

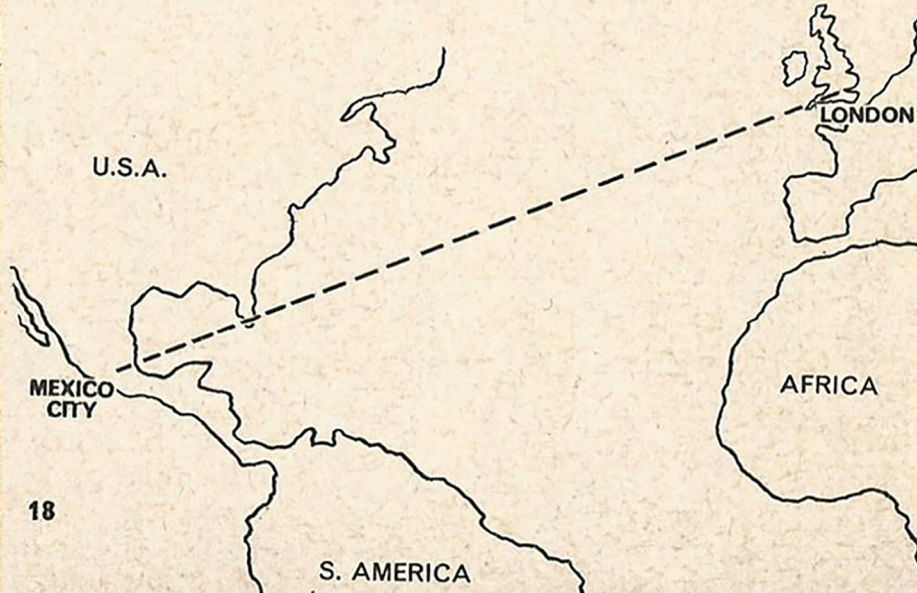
4 There are more than 150 automatic diecasting machines at Hackney and all have been designed, built and installed by Lesney engineers.

7 Ingenious packing machines pick up the flat boxes, shape them and seal the model at the rate of more than 120 items per minute.

8 Ultra-modern, automatic handling and automatic conveyor systems speed the finished models to the transit stores where electronic selection equipment routes each package.

From the highly individual, skilled work of the enthusiast who produces hand-made samples of new ideas, to the multi-million mass assembly of the finished models by hundreds of workers. This is the remarkable story of the manufacture of "Matchbox" models. Over 3,600 people play their part in a great team with the highest score in the world–over 100,000,000 models made and sold per year.

Enthusiasts of all ages throughout the world collect and enjoy "Matchbox" models today and it is a true but amazing fact that if the models from a year's work in the Lesney factories were placed nose to tail, they would stretch from London, England, to Mexico City–a distance of over 6,000 miles!



"MATCHBOX"

GIFT SETS

A wonderful new series of eight sets, each including many of the latest super-detail models. All the contents are visible in modern, dust-proof, see-through packs printed in full colour.

The "Matchbox" Story

IT ALL BEGAN IN 1953, with a miniature diecast model of the Coronation Coach with its team of eight horses. In Coronation Year over a million were sold and this tremendous success was followed by the introduction of the first miniature vehicle models packed in matchboxes. And so the famous "Matchbox" Series was born.

At the very beginning it was decided to make the whole "Matchbox" Series sell at one price and this new range was numbered from 1, until 75 different models were produced by 1960. Models were then regularly withdrawn and replaced by new models which included many of the now-famous "Matchbox" features such as windows, opening doors, suspension, engines, etc. Thus, the "Matchbox" Series is ever-changing, making it the most modern and exciting of its kind in the world.

Some of the early models were perhaps simple compared with the super "Matchboxes" of to-day, but even so they have now become collector's pieces and often change hands for much more than their original price.

The tremendous success of this new range was soon followed by the introduction of the "Models of Yesteryear", "Matchbox" Major Packs and "Matchbox" King Size. A similar demand for these has grown, and to-day, "Matchbox" models are enjoyed in just about every country in the world.

From the tiny Coronation Coach of the Queen of England to the world's largest makers of model vehicles—that is the miniature success story of "Matchbox".

GIFT SETS

"MATCHBOX" QUIZ ?????

Test your knowledge and observation of your collection of "Matchbox" models with these simple questions. No prizes, but see if you can score more than your friends and find out who is the top "Matchbox" model expert.

1. From which country comes the full-size version of the famous "Models of Yesteryear" No. Y-16 Spyker?
2. Do you know where the engine is situated in the real-life Volkswagen Camper? Study your "Matchbox" Series No. 34 to help you find the right answer.
3. How many wheels are there on the "Matchbox" Series No. 66 Harley-Davidson Motorcycle?
4. Why is the prototype of the very famous "Models of Yesteryear" No. Y-15 1907 Rolls-Royce called a "Silver Ghost"?
5. How are the rams which tip the real Hoveringham Truck ("Matchbox" King Size Series No. K-1) operated? Is it by electrics, hydraulics or pneumatics?
6. Who is the world's greatest manufacturer of motor vehicles?
7. In which countries are the four famous International Motor Racing Circuits listed on the side of the new "Matchbox" Major Pack No. M-6 Racing Car Transporter? The circuits are Le Mans, Sebring, Silverstone and the Nurburgring.
8. Do you know the shape of the famous Mercedes Star? It is on three "Matchbox" Models, Nos. 27, 68 and "Models of Yesteryear" No. Y-10.
9. New "Matchbox" Series No. 64, MG 1100 is a unique model, being the first-ever "Matchbox" car with driver *and* his dog, as a happy passenger on the back seat. The real MG 1100 is one of a range of unique cars with many advanced features. Do you know which wheels drive this car?

ANSWERS TO "MATCHBOX" QUIZ

1. Holland.

2. It is above and behind the back axle and is partly hidden beneath the floor.

3. There are two wheels on the motorcycle. There are, of course, three on the motorcycle and sidecar!

4. The original car was so silent and smooth in its day by comparison with other, noisy contemporary machines that the manufacturer christened it the "Ghost". The first "Ghosts" were in a beautiful, polished silver finish, and soon became known as "Silver Ghosts".

5. Hydraulics. This system uses liquids under pressure, produced by an engine-driven pump, to apply a powerful thrust in each ram (which is really a piston and cylinder).

6. LESNEY, OF COURSE! General Motors of America may be the biggest, but "Matchbox" still make the greatest number of vehicles per year. Over 100,000,000— many times more than all the great full-size manufacturers added together.

7. Le Mans—France
Sebring—Florida, U.S.A.
Silverstone—England
Nurburgring—Germany

8.

9. The front wheels drive this car from the engine which is mounted across the vehicle at the front.

Well, how many points did you score? Nearly 9, and you are a Five-Star top-class "Matchbox" model expert. Up to 7—you certainly know about your models and the full-size machines. For less than 4 there is only *one* answer to the problem—**buy more "Matchbox" models** and next time you will know all the answers!
